

Run your **ema^{imk}** software suite in the **axilaris collaboration hub**

based on virtual desktop infrastructure

NEW!

How the axilaris collaboration hub works

- » the collaboration hub is hosted in the axilaris data centers
- » for each ema software license, the collaboration hub provides the corresponding virtual workstation
- » all the resources required for the high-performance operation of your ema software instance are allocated directly in the collaboration hub
- » access options (if required also by 2-factor authentication) to your virtual ema software account:
 - web browser
 - windows 10 application
 - native iOS or android app
- » according to the computing intensity of your ema projects the performance levels Base and Plus are available in the collaboration hub:

	Base	4 CPU, 8 GB RAM, 2GB GPU	Plus	8 CPU, 16GB RAM, 4GB GPU
ema Work Designer Professional		✓		✓
ema Plant Designer Professional		✓		
ema Software Suite (emaWD PRO und emaPD PRO)				✓

Privacy & Security

As part of the axilaris collaboration hub, all your ema suite data is stored at all times in one of our data centers in Germany, certified according to EN 50600 and ISO 27001. Access to your ema suite is provided via an encrypted connection (without vpn), which is protected by a multi-level firewall concept. Furthermore, it is also possible to consider your company's internal firewall requirements.

By default, your data is backed up via a 30-day backup in the axilaris data centers. Longer-term backups in the axilaris data centers or on external media are also possible on request.

Your benefits in the axilaris collaboration hub

Work on your ema project via encrypted remote access anytime & anywhere.

Site-independent collaboration on the same ema instance / in the same ema project

Worldwide access without risk of geo-blockades (e.g. China)

Price benefit: there is no expensive investment in ema-compatible hardware necessary

Real-time image transmission from the collaboration hub always provides a smooth and clear image

Perfectly suited also for calculation-intensive ema projects

You retain full control over your data - no unauthorized access to your data

Always the latest ema version on always the most modern hardware technology

Thanks to the powerful and highly available axilaris data centers, the performance resources of your ema suite can be scaled individually

Technical requirements

- » technical end device (PC, laptop, tablet, smartphone) with internet connection
- » no special equipment of the end devices necessary

We will be pleased to advise you on your individual questions.
